Eddy Ndumia

Developer and data engineer (AWS) - Maths & Computer Science, JKUAT - Nairobi, Kenya
eddyndumia.github.io | github.com/eddyndumia | linkedin.com/in/eddyndumia

SUMMARY

Mathematics and Computer Science student at JKUAT, finishing December 2026. I've built websites and full-stack apps for small businesses since 2020, and I do data engineering on AWS: cleaning messy data and building pipelines that don't break. Most interested in finance, crypto and AI.

EXPERIENCE

Builder - Aura Farm

2026 - Present

- Brainrot arcade game in TypeScript on a plain canvas, one codebase for web and Android (Capacitor). AdMob with rewarded-first placements and capped interstitials, mixed-audience age gate with child-directed ads for under-13s (Play Families policy), adaptive rendering for low-end phones.
- Live October 2026 (v1.1.1): web game and signed Android APK, Google Play closed test running. aura-farm.eddyndumia.workers.dev

Builder - Chukua

2026 - Present

- Flutter app for giving away things you don't need to people nearby, with M-Pesa claim fees. Supabase + PostGIS, atomic claim holds, all rules enforced in SQL, Row-Level Security keeping givers' phone numbers private until a claim is paid.
- Live as a first release (v1.0.0, October 2026): signed Android app, email-code sign-in, free claims for the Nairobi pilot. chukua.eddyndumia.workers.dev

Builder - Voice Forge

2026 - Present

- Windows desktop app for AI song covers in Python (FastAPI + pywebview): vocal separation (BS-Roformer), RVC voice conversion and a mix and master chain (pedalboard, Matchering). GPU jobs run on free Kaggle T4s driven through the Kaggle API, local splitting on DirectML. Lyrics to song with ACE-Step, voice training with a consent step.
- Voice registry with licenses: only own or licensed voices can be published. Community site on Cloudflare Workers, D1 and R2 with Google sign-in and PKCE app login, built but not deployed. Private, in development.

Freelance Web Developer - Kenya

2020 - Present

- Famyard Enterprises (land sales, Nyeri/Laikipia): rebuilt their site in Next.js on Cloudflare Pages, plus a custom CMS (Postgres, role-based login, inquiries inbox) so staff manage plots and content without WordPress.
- Sites and full-stack builds for other small businesses, in WordPress or code.

EDUCATION & TRAINING

B.Sc. Mathematics and Computer Science - JKUAT

2020 - 2026 (graduating December 2026)

ALX / Holberton Software Engineering Program

2023 - low-level programming in C, algorithms, Linux/DevOps

SELECTED PROJECTS

Aura Farm - Brainrot arcade game, catch the Ws and evolve into Tung Tung Tung Sahur. TypeScript + Capacitor, live on web and Android.

Chukua - Free things from people near you in Nairobi. Flutter + Supabase, live on Android since October 2026.

Voice Forge - Desktop app that re-sings a song or your own recorded vocal in another voice, mixes and masters it. Python, heavy GPU work on free Kaggle T4s.

Sales ETL Pipeline - Messy raw sales data cleaned, tested, and loaded into a quality-gated SQLite warehouse; 6 automated data-quality checks gate every run.

Sales Demand Forecasting - Seasonal-naive vs. SARIMA vs. XGBoost on a 90-day holdout; XGBoost's calendar features catch the yearly retail spikes SARIMA misses.

SKILLS

Languages: Python, TypeScript, JavaScript/Node.js, Dart, SQL

Data: Pandas, NumPy, Scikit-learn, XGBoost, statsmodels, Airflow

Infra: Postgres, PostGIS, Supabase, Cloudflare Workers, Docker, AWS

Web & mobile: React, Next.js, Flutter, Capacitor, WordPress
